Strategic Consulting

Clients regularly engage our strategic consulting services for the optimisation and development of coal mining and processing operations. Our expertise provides clients with valued input in the development of strategic outcomes for projects.

A key component of our strategic consulting services is our recognised ability in the development and manipulation of washability data, simulation using the LIMN package and application of coal quality data to mine planning and coal specification derivation.

Consulting work is supported by QCC expertise in CHPP design and project delivery.

Key Services

- » Coal quality
- » Bore core testing programs
- » Process simulation
- » Concept, prefeasibility and feasibility studies
- » Due diligence and IPO work
- » Operational reviews
- » Mine yield and product algorithms
- » Financial optimisation modelling
- » Research and development
